

Практическая работа номер 16

1. Создаем сеть

2. Редактируем оба роутера

```
Switch>en
Switch#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)#hostname lsw
lsw(config)#int vlan 1
lsw(config-if)#no sh

lsw(config-if)#
%LINK-5-CHANGED: Interface Vlan1, changed state to up

%LINEPROTO-5-UPDOWN: Line protocol on Interface Vlan1, changed state to up

lsw(config-if)#ip address 192.168.0.2 255.255.255.0
lsw(config-if)#exit
lsw(config)#
```

```
Switch>en
Switch#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)#hostname lsw
lsw(config)#int vlan 1
lsw(config-if)#no sh

lsw(config-if)#
%LINK-5-CHANGED: Interface Vlan1, changed state to up

%LINEPROTO-5-UPDOWN: Line protocol on Interface Vlan1, changed state to up

lsw(config-if)#ip address 192.168.0.2 255.255.255.0
lsw(config-if)#exit
lsw(config)#
```

```
graph LR; PC0[PC-PT PC0] --- S1[2960-24TT Switch1]; S1 --- S2[2960-24TT Switch2];
```

The diagram illustrates a network topology. On the left, a PC icon is labeled "PC-PT PC0". A solid line connects it to a switch icon labeled "2960-24TT Switch1". Another solid line connects Switch1 to a second switch icon labeled "2960-24TT Switch2". A dashed line is shown between the two switches, indicating a logical or virtual connection. Green triangles mark the connection points between the PC and Switch1, and between Switch1 and Switch2.
